

Module 2 Project Map

Trace code from declaration to definition to use

Student: _____

Date: _____

Pathway: Code Learning / Robot Programming

Team: _____

Function Trace: move()

Step	File	Line or example	What happens here?
Declaration	movement.h		
Definition	movement.cpp		
Call	auto.cpp		

Argument Map

Argument	Type	What it controls	Example value
distance			
heading			
voltage			
exit voltage			
stop			

Hardware and Software Map

Students without a robot should use the default template configuration.

Hardware	Software object	Port	Reversed?	Purpose

Explain an Object

```
Inertial.heading();
```

Why does this expression use both an object and a function?

Project Relationship

Explain how robotConfig.cpp, robotConfig.h, and the other source files work together.
