

Module 3 Configuration Planner

Plan robot configuration and driver-control changes before editing code

Student: _____

Date: _____

Pathway: Code Learning / Robot Programming

Team: _____

Robot Configuration

Object	Type	Port(s)	Reversed?	Gear	Purpose

Drivetrain Measurements

Wheel diameter: _____ External gear ratio: _____ Cartridge: _____

Separate left and right motor groups confirmed: Yes / No

Driver Preference Changes

Setting	Original	New	Reason
Deadband			
Sensitivity			
Coast-to-brake timing			
Button mapping			
Mechanism speed			

Mechanism Toggle Plan

Mechanism: _____ Controller button: _____

Boolean variable: _____ Safe default state: _____

Describe what happens on each button press.

Compilation and Test Record

Compiled successfully: Yes / No Hardware demonstrated: Yes / No / Not available

If compilation failed, record the exact message and explain the likely cause.
